# Y mx b worksheets graph functions using different words

Graphing Quadratic Equations Review Name \_\_\_\_\_

**Example 1:**  $f(x) = 2x^2 + 4x - 3$

x	f(x)

After we have  $x = \frac{-b}{2a}$  and  $f(x)$ , use the graphing calculator to find the sum or sum-difference, or whether the parabola opens upward or downward. This point is your vertex.

Now choose two points (other than the vertex) to the right of the vertex and two points (other than the vertex) to the left of the vertex and plot these points on the graph.

Finally, connect the points of the parabola.

**Example 2:**  $f(x) = -3x^2 + 4x - 1$

x	f(x)
